IMPRINT METHODS

FULL COLOR PRINT

Full color printing is the process by which an inkjet printer prints directly onto the surface of a product. These imprints are bright, detailed and offer maximum brand exposure.

FULL COLOR DECAL

Full color decals are glossy, vibrant, high quality decal paper allowing for detailed artwork. High-grade adhesive backing secures the decal to the product, creating an eye-catching imprint.

PAD PRINT

Pad printing transfers an imprint onto a product via the stamping of an inked silicone pad that has a mirrored image of the imprint cut out of it.

SCREEN PRINT

Screen printed imprints are created through the process of burning the imprint into a silk mesh screen, creating a stencil for ink to pass through onto the product.

LASER ENGRAVE

Laser engraving is the process by which lasers burn an imprint into the surface of a product, leaving a marking distinct in color and texture from that of the metal.

EPOXY DOME

An epoxy dome is created by placing an imprint in the head of a writing instrument and sealing it with a clear drop of epoxy, creating a smooth, vibrant shine.
